Crest Medical Impact Statement: Collaborating with Suppliers for Net Zero

Introduction

Crest Medical is committed to achieving net zero emissions and is actively working with its suppliers to drive sustainable practices across the supply chain. By fostering collaboration, innovation, and accountability, we aim to reduce carbon footprints and enhance environmental sustainability.

Supplier Collaboration Initiatives

Sustainable Procurement Policy: Crest Medical has implemented a Sustainable Procurement Policy, ensuring that environmental criteria are integrated into supplier selection and evaluation. Suppliers are required to demonstrate carbon reduction strategies and alignment with net zero targets.

Carbon Footprint Reduction Programs: We work closely with key suppliers to monitor and reduce greenhouse gas (GHG) emissions. By leveraging tools such as lifecycle assessments and carbon footprint tracking, we identify high-impact areas for emissions reduction.

Renewable Energy Adoption: Through joint initiatives, we encourage suppliers to transition to renewable energy sources. Several of our suppliers have shifted to solar and wind energy to power their manufacturing processes, significantly lowering carbon emissions.

Sustainable Logistics and Packaging: To minimize environmental impact, Crest Medical collaborates with logistics partners to optimise transportation routes, adopt fuel-efficient vehicles, and explore low-carbon delivery alternatives. We also work with packaging suppliers to develop recyclable and biodegradable materials.

Supplier Training and Engagement: We conduct workshops and training sessions for suppliers to enhance their understanding of sustainable practices and regulatory compliance. This includes knowledge-sharing on carbon reduction techniques, waste management, and circular economy principles.

Science-Based Targets and Reporting: Our suppliers are encouraged to adopt science-based targets (SBTs) to ensure measurable and transparent carbon reduction. We facilitate reporting mechanisms that align with global sustainability frameworks such as the Carbon Disclosure Project (CDP) and the Science-Based Targets initiative (SBTi).

Results and Impact

- A 15% reduction in supply chain emissions over the past three years.
- 40% of our suppliers have transitioned to using renewable energy sources.
- A 25% decrease in plastic packaging usage across our product lines.
- Enhanced supplier engagement, with over 80% participation in sustainability training sessions.

Future Goals

Crest Medical remains dedicated to strengthening supplier collaboration to achieve net zero by 2045. Our roadmap includes expanding carbon-neutral initiatives, further investing in green technologies, and driving industry-wide advocacy for sustainable supply chains.

By working hand-in-hand with our suppliers, Crest Medical is making significant strides toward a net zero future. Through shared commitment and strategic action, we continue to foster an environmentally responsible and resilient supply chain.

Declaration and Sign Off:

This Collaboration with Suppliers – Net Zero Impact Statement has been reviewed and signed off by the board of directors (or equivalent management body).
